

# DS3 Workbench

**DS3 Development Team<sup>1</sup>** 

## **Building Infrastructure to Support DS3 Operations**

The DS3 Workbench forms the umbrella for inward-facing projects that build infrastructure for Data Science & Software Services (DS3) operations. The main goal is to support intake and management of faculty research projects that are supported by DS3. In particular, the workbench will provide to following functionality:

- (a) an interface that allows researchers at NYU to submit project proposals and resource requests,
- (b) send notifications to researchers about potential grant opportunities for their projects,
- (c) an interface that allows students to submit their CV and express their interest to work for DS3 in the future,
- (d) assist DS3 administrators with resource and project planning, and with the hiring process.

NYU researchers can enter their project proposals and resource requests via a customer user interface. Among other information they need to specify the kind of work they expect from DS3 as part of their project (e.g., required skills and nice to have skills). If a researcher proposes a project for which they currently do not have grant funding the workbench can notify them about suitable grant opportunities.

### **Matchmaking & Resource Planning**

The matchmaking tool assists with various tasks:

- identify (a set of) employees to work on a submitted project,
- highlight shortage of skills to satisfy project requirements,
- identify potential candidates for hiring.

#### **Grant Recommendation**

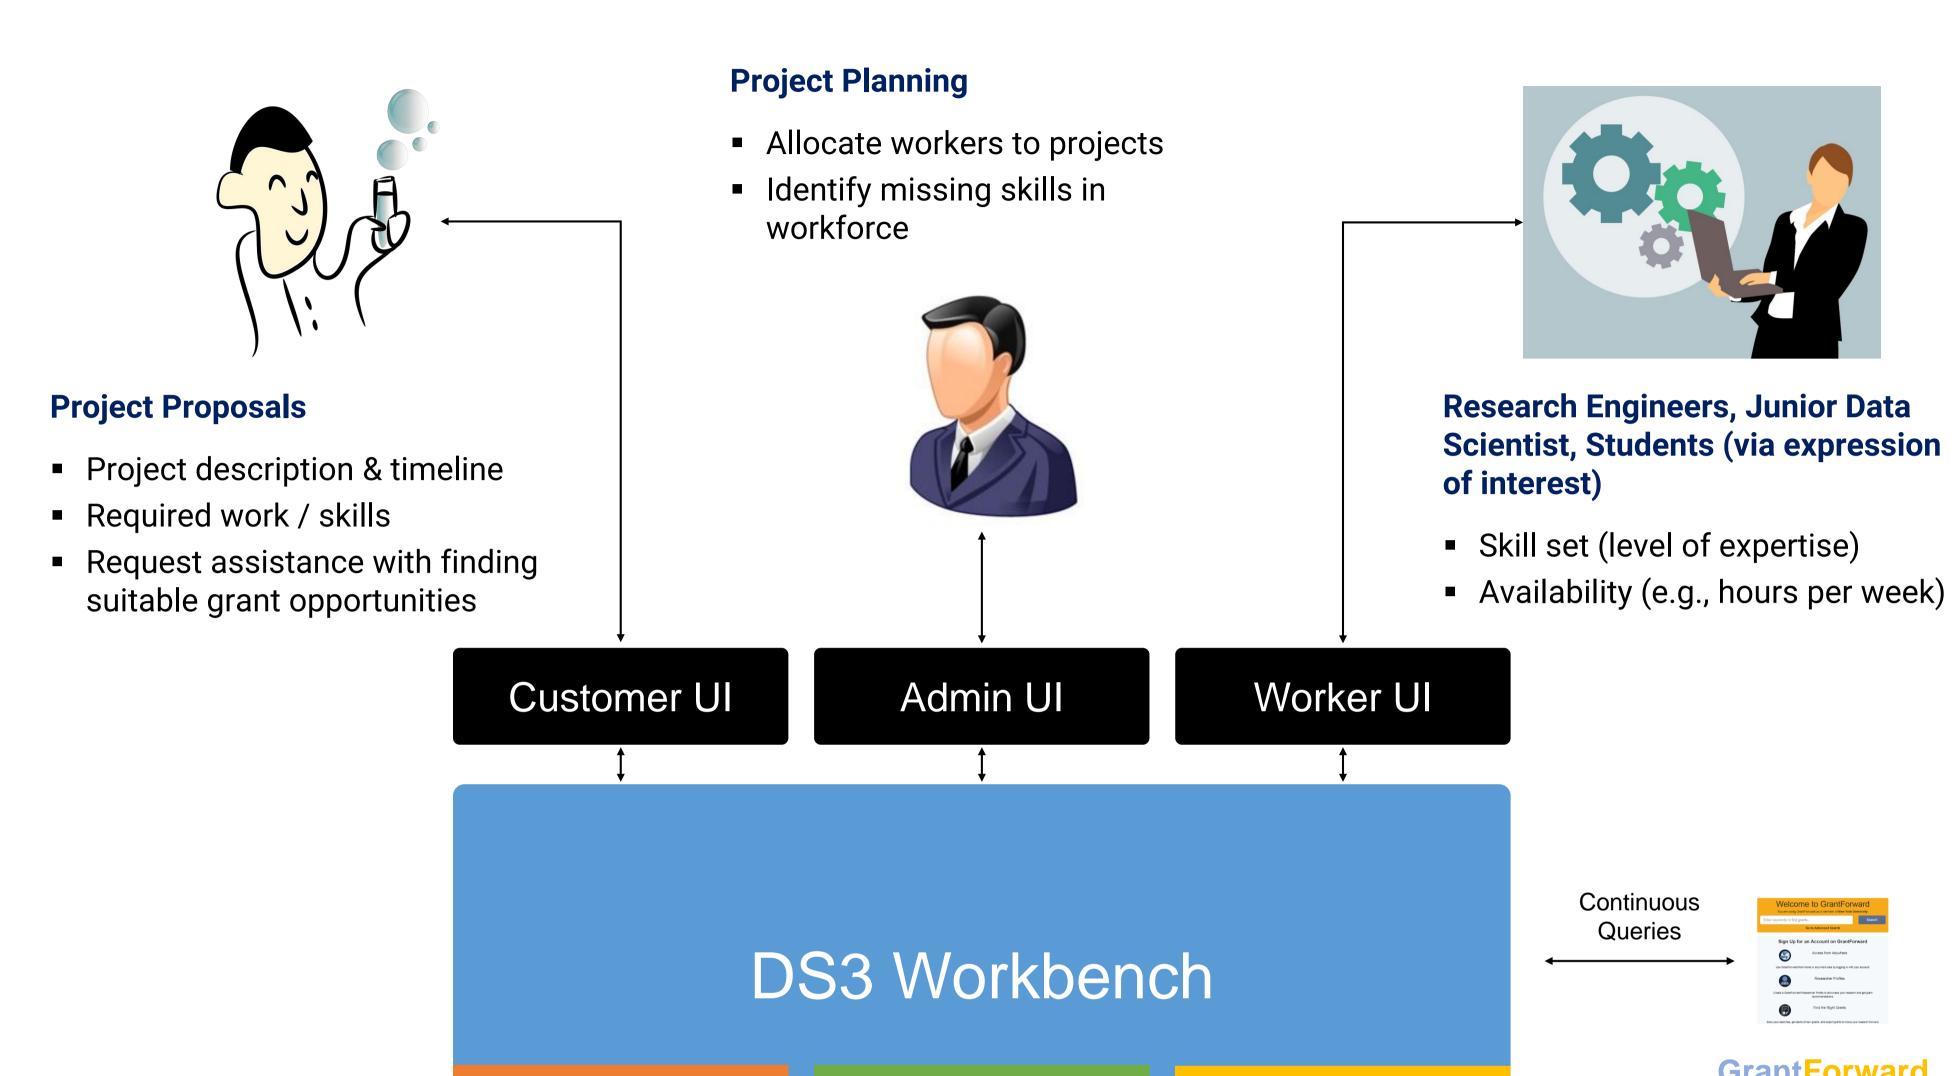

The grant recommendation engine uses GrantForward (a service that NYU is subscribed to already) for continuous queries (e.g., once a day) to identify grant opportunities for projects that do not yet have funding.

### <sup>1</sup> Development Team

The following NYU students have contributed to the DS3 workbench:

Shaoling Chen Jeewon Ha Yuxuan He Jatin Khilnani

For more information, please contact: Heiko Mueller (heiko.mueller@nyu.edu)

 Match DS3 workers with a project proposal

Matchmaking

Resource

Planning

- Suggest potential hires for projects and assist with hiring process
- Manage information about who is allocated to which project for how much of their time
- Continuously monitor online resources for grant opportunities that match a proposed project

Grant

Recommendation

- Maintain user search profiles and notify users about new opportunities
- Extensible architecture to support other activities (e.g., assist planning for Capstone projects).
